

Kate Hill | DevSecOps Engineer

72 Adams Street NW #1 – Washington, DC 20001

☎ +1 484-547-3255 • ✉ kate@katehill.tech • 🌐 katehill.tech

Profile

DevSecOps engineer with extensive experience securing cloud infrastructure for regulated industries (insurance, US federal healthcare), embedding vulnerability scanning, compliance hardening, and access management directly into CI/CD pipelines and infrastructure-as-code. Currently studying Icelandic (A1) and seeking relocation to Iceland; would require employer-sponsored work permit.

Employment

Corvus Insurance (*acquired by Travelers Insurance January 2025*)

DevOps Engineer

November 2022 – July 2026

- Rebuilt a standardized enterprise golden image in compliance with corporate security standards to establish a unified baseline for core build systems and all AWS Lambda production runtimes.
- Integrated Snyk CLI into shared GitHub Actions build workflows to ensure security vulnerability identification and remediation for audit compliance.
- Developed and deployed AWS Kinesis Firehose to route application logs through enterprise Splunk; wrote documentation and custom queries to improve system visibility for engineering teams.
- Led infrastructure retirement following acquisition, reducing both spend and attack surface, while maintaining modular Terraform across multi-account AWS environments.
- Standardized and centralized GitHub Actions workflows across 20+ engineering repositories and migrated workloads to self-hosted runners to ensure compliance with enterprise security policy.
- Wrote comprehensive documentation and delivered technical presentations on infrastructure architecture to improve team knowledge transfer during company acquisition.

BlueLabs

DevOps Lead

October 2018 – August 2021

- Led contractor side of technical security audits for Healthcare.gov outreach systems and implemented Docker image vulnerability scanning using Clair.
- Managed and modernized legacy data pipeline infrastructure for Healthcare.gov/CMS outreach programs.
- Served as sole engineer maintaining 24/7 on-call during Open Enrollment period and wrote extensive incident and DR playbooks and documentation for new engineer onboarding.
- Architected CI/CD pipelines across Concourse, Jenkins, and CircleCI; refactored Ansible playbooks and Bash automation to streamline EC2 provisioning and access management.
- Wrote modular Terraform to manage AWS infrastructure (EC2, S3, EKS, Redshift) and built Apache Airflow pipelines to automate CMS data processing workflows.

Slate

Software Engineer

October 2016 – June 2018

- Led CDN migration from Akamai to Fastly and built custom Jenkins pipelines for user provisioning and automated post-deployment speed testing.
- Engineered custom Node.js CMS functionality and built data migration models for archival editorial content.

Technical Skills

- **Security & Compliance:** Vulnerability scanning & remediation (Snyk, Clair), compliance-driven infrastructure hardening, security audits, secrets & key management
- **Cloud & Infrastructure:** AWS (EC2, RDS, Lambda, IAM, VPC, KMS, others), Terraform, Docker, BuildKit, Git
- **CI/CD & Automation:** GitHub Actions, Nexus, Jenkins, Ansible, Concourse
- **Observability & Scripting:** Splunk, OpenSearch, Sentry, Python, Bash

Education

Cedar Crest College

BS Genetic Engineering, Mathematics

Allentown, PA, USA

2003–2007

Háskólaþing Vestfjarða

Icelandic Language

Ísafjörður, IS

July 2026
