Employment

Corvus Insurance *(acquired by Travelers Insurance January 2025)*

DevOps Engineer *November 2022 – July 2026*

- Rebuilt the enterprise golden image to corporate security standards, giving core build systems and all AWS Lambda production runtimes a single hardened baseline.
- Consolidated GitHub Actions workflows across 30+ repositories into a shared, centrally maintained set, and moved CI onto self-hosted runners under enterprise security policy.
- Added Snyk CLI scanning to a core shared GitHub Actions workflow, making vulnerability identification part of every build.
- Built a Kinesis Firehose pipeline routing application logs through enterprise Splunk; wrote documentation and custom queries to improve system visibility for engineering teams.
- Led post-acquisition infrastructure retirement across multi-account AWS environments, reducing both spend and attack surface.
- Led knowledge transfer through the Travelers acquisition; wrote infrastructure documentation and gave technical presentations on system architecture to a team of over fifteen engineers.

BlueLabs

DevOps Engineer *October 2018 – August 2021*

- Sole engineer for Healthcare.gov/CMS outreach systems during a full engineering team turnover, including 24/7 on-call through Open Enrollment; wrote the incident and DR playbooks used to onboard new engineers.
- Designed portions of the technical interview for new engineering hires; led their onboarding, initial training, and task delegation.
- Led contractor side of technical security audits for Healthcare.gov outreach systems and implemented Docker image vulnerability scanning using Clair.
- Architected CI/CD pipelines across Concourse, Jenkins, and CircleCI; refactored Ansible playbooks and Bash automation to streamline EC2 provisioning and access management.
- Wrote modular Terraform to manage AWS infrastructure (EC2, S3, EKS, Redshift) and built Apache Airflow pipelines delivering CMS data to the data engineering team.

Slate

Software Engineer *October 2016 – June 2018*

- Led CDN migration from Akamai to Fastly and built custom Jenkins pipelines for user provisioning and automated post-deployment speed testing.
- Engineered custom Node.js CMS functionality and built data migration models for archival editorial content.

Earlier roles 2013–2016 omitted for space; full history available on request.

Technical Skills

- **Security & Compliance:** Vulnerability scanning & remediation (Snyk, Clair), compliance-driven infrastructure hardening, security audits, secrets & key management
- **Cloud & Infrastructure:** AWS (EC2, RDS, Lambda, IAM, VPC, KMS, others), Terraform, Docker, BuildKit, Git
- **CI/CD & Automation:** GitHub Actions, Nexus, Jenkins, Ansible, Concourse
- **Observability & Scripting:** Splunk, OpenSearch, Sentry, Python, Bash

Education

Cedar Crest College **Allentown, PA**

BS Genetic Engineering, Mathematics *2003–2007*
